Testing Table

You must create a testing table that covers all pathways through the code

Item Tested	Test Data	Expected result	Actual Result	Changes Required
Base case	100 workers, 0 queens, 5km, no codes	100*0.05+0*15 = $5 No surcharge Postage=$10 No discounts Final cost = $15	As expected	—
1 Queen	Base case = 1 queen	100 * 0.05 + 1 * 15 = $20 Surcharge = $2.50 Postage = $10 No discounts Final cost = $32.50	As expected	—
FREEPOST code (uppercase)	Base case = "FREEPOST" code	100 * 0.05 + 0 * 15 = $5 No surcharge Postage = $0 No discounts Final cost = $5	As expected	—
FREEPOST code (lowercase)	Base case = "freepost" code	"	As expected.	—
HALFPOST code (uppercase)	Base case = "HALFPOST" code	100*0.05+0x15 = $5 No surcharge Postage = $ 5 No discounts Final cost = $10	As expected	—

HALFPOST code (lowercase)	Base case = "halfpost" code	//	As expected	—
SALE code (uppercase)	Base case = "SALE" code	100 x 0.05 + 0 x 15 = $5 No surcharge Postage = $10 Discount = $1.50 Final cost = $13.5	As expected	—
SALE code (lowercase)	Base case = "sale" code	//	As expected	—
POSTAGE 50km boundary	Base case = 49 km	100 x 0.05 + 0 x 15 = $5 No surcharge Postage = $10 No discounts Final cost = $15	As expected	—
//	Base case = 50 km	100 x 0.05 + 0 x 15 = $5 No surcharge Postage = $20 No discounts Final cost = $25	As expected	—
//	Base case = 51 km	//	As expected	—
POSTAGE 150km boundary	Base case = 149 km	//	As expected	—

POSTAGE 150 km boundary	Base code = 150 km	100 x 0.05 + 0 x 15 = $5 No surcharge Postage = $30 No discounts Final cost = $35	As expected	—
150km boundary AND over 150km boundary	Base code = 151 km	//	//	—
VALIDATION distance range	Base code = -1 km	Exit program	Error	changed validation location to within main()
queen range	Base code = -1 queens	Exit program	As expected.	—
worker range	Base code = -1 workers	Exit program	As expected	—
