Testing Table: Part 3

You must create a testing table that covers all pathways through the code

Item Tested	Test Data	Expected result	Actual Result	Changes Required
Treeview layout	N/A	Empty formatted treeview with the relevant columns (saleID, Workers, Queens, Distance (km), Bonus Code, Final Cost) and no visible data	As expected.	—
Result Accuracy	Filter: Orders with Queens Sort By: total_cost	Treeview updated to show all the orders in the CSV which have at least one queen, ordered in ascending order of the orders final cost	As expected.	—
Result Accuracy	Filter: Orders with no Queens Sort By: total_cost	Treeview updated to show all the orders in the CSV which have zero queens, ordered in ascending order of orders final cost	As expected.	—
Result Accuracy	Filter: Orders with Queens Sort By: distance_km	Treeview updated to show all the orders in the CSV which have at least one queen, ordered in ascending order of the distance to be shipped	As expected.	—
Result Accuracy	Filter: Orders with no Queens Sort By: distance_km	Treeview updated to show all the orders in the CSV which have zero queens, ordered in ascending order of the distance to be shipped	As expected.	—
